## ABOUT ME

software engineer Student with 3 years of experience, AI Engineer Learner specializing in Generative AI and Data Science. A versatile professional who can be described as a Full-Stack Developer or a Multidisciplinary Software Engineer.

---

## EDUCATION

2022-2025

Licence Diploma

Software Engineering & Information System at University of Science Gabes

2022

High School baccalaureate Diploma

---

## EXPERIENCE

During my self-driven project work, I designed and built an end-to-end application integrating Large Language Models with a Retrieval-Augmented Generation pipeline. I implemented core AI, machine learning, and deep learning components to enhance model performance and user interaction. On the frontend, I developed a responsive and intuitive interface using React, while the backend logic and API services were structured in Laravel. This project strengthened my skills in full-stack development, AI system integration, and deploying modern intelligent applications.

---

## CERTIFICATION

- General IA Basics and NLP
  - AI and Application
- 

## SKILLS

- python js sql php c c# c++
- flask django fastapi
- Scikit-Learn TensorFlow PyTorch
- git github
- linux
